

CARL SHAMBURGER NURSERY

AUTUMN, 1936

SPRING, 1937

Tyler, Texas

Roses sent on your order come from fields like this. We invite you to visit us and see the plants.

Hints That Will Help You in Ordering

Send your order as soon as you can; you will then be sure of securing the varieties you want. Late in the season some sorts may be sold out. Order early and avoid disappointment.

Our Guarantee. We guarantee that all Roses shall be true to variety name, No. 1 grade, 2-year-old field-grown; they shall be properly packed and delivered in good order to the post office, express office, or freight office, as you instruct. As we cannot control weather or growing conditions, it is obvious that we cannot guarantee the plants to live. In event of replacement, within one year from date of order, we will, upon proper proof to our satisfaction, replace any plant at half price. It is mutually agreed and understood between the purchaser and ourselves that in any case we shall not be liable for a sum greater than the amount originally paid us for any plant that proves untrue. Complaints, if any, must be made in writing within five days after receipt of plants.

Terms. Cash is requested with all orders; we have no credit department, and therefore must do a cash business. Orders amounting to \$2 or more will be sent prepaid to any point in the United States. If the order amounts to less than \$2, add 15 cts. to cover packing and transportation costs, regardless of the number of plants.

Shipping. Because of our central location we can fill your orders promptly, forwarding the plants by parcel post, express, or freight, as you instruct. All plants will be properly packed and delivered to the transportation office in accordance with the terms printed above.

Orders and letters should be directed to

Our office and nurseries are on the Dixie Hiway, four miles north of Tyler

A Message to Our Customers and Friends

FOR many years we have been engaged in growing Roses. Obviously, this has given us wide experience with plants and a knowledge of the varieties that are most popular and satisfactory to professional and amateur gardeners. Plants from our fields are growing and blooming in many of the noted Rose collections of America.

Our methods of growing plants differ somewhat from the usual way. We believe we get exceptionally good results—and our customers seem to agree with us. First of all, we are very particular about the understock, the plant on which the named variety is budded. This understock must be a strong, healthy, well-developed plant, or it is not used. Next, the buds of the desired variety are taken from selected plants, and the budding operations carried on by trained men.

After the bud has begun to grow, the “mother” plant is cut away. Then proper feeding forces the roots to turn their activities into making a strong, sturdy plant of the desired variety. The next important step is to keep the young plant free from childhood diseases. Our entire Rose fields are dusted thoroughly with sulphur preparations, maintaining the foliage in a clean, healthy state, free from black-spot, mildew, and insect pests. Clean foliage is essential in storing plant energy and results in giving our customers strong, vigorous plants for their gardens. Every plant that we send out is two years old, field-grown, and free from disease. With even the slightest care they should thrive and bloom for years to come.

Simple Suggestions for Planting Roses

Setting a Rose properly is an insurance against loss. The operation is simple, and can be carried out by anyone.

Prepare the bed or border by spading 18 to 24 inches deep. Take out about half of the soil; with the remainder mix in about half its bulk of well-decayed manure. Then put back the top-soil and level it as far as possible. This work should be done a week or ten days before the plants arrive.

When you receive the plants, do not let them be exposed to sun or wind. Keep them covered to prevent drying out. Dig a wide hole, so that the roots may be spread apart, and deep enough to set the bud or joint just below the level surface. Cut off any broken or bruised roots; work the soil in and around the roots, and be

Photo by Gettings
Miss Gertrude Ann Windsor
Queen of the Texas Rose Festival
Tyler, Texas,
October 2 to 6, 1936

sure they are well covered. Then partly fill the hole, tamping the soil to make it solid. Pour in three or four quarts of water and let it soak away; then fill the hole, packing all the soil except the top inch or more, which should be loose, to act as a mulch.

In severe climates protect the bed with a winter mulch of leaves, litter, or straw, which must be removed in spring. A summer mulch of peat moss conserves moisture and keeps down weeds.

Rose plants can be kept free from insects and most diseases by dusting or spraying. As a general thing dusting with sulphur dust is easier, more satisfactory and fully as effective. It may be applied in the morning when dew is on the foliage or after a shower.

©

Gloaming

Gloaming

Plant Patent No. 137

Pictured above. Words are not needed to tell of its beauty. The flowers are large, fragrant, and last many days after cutting. The color is soft pink with a satiny sheen, and overlaid with salmon and amber. The blooms are carried on long stems, on robust, branching plants. Strong, free-blooming plants. \$1.50 each, \$15 per doz.

Signora (*Plant Patent pending*)

©

Signora

New this season. Awarded Colle Oppio Gold Medal in 1935. Both bud and bloom are warm shade of burnt sienna, shading to gold at base of petals. \$2 each, \$20 per doz.

Countess Vandal

Plant Patent No. 38

Emphatically a popular Rose. The shadings of coppery bronze suffused with gold make the Countess attractive from bud to mature bloom. A dozen flowers will brighten a large room. \$1 each, \$10 per doz.

Eclipse

Plant Patent No. 172

See the color plate on back cover. The richest gold imaginable—"It Eclipses all others." Long, slender buds, opening into blooms of 25 or more petals. Awarded prizes in Paris, Rome, London, and many other places. \$1.50 each, \$15 per doz.

New and

All Rose amateurs long to try new varieties. Often they hesitate because they do not know what varieties to choose. Here are Roses that we recommend; we have grown them and watched them from the beginning. We know they are good, and we believe they will please you.

Nigrette

Nigrette

Plant Patent No. 87

Commonly known as "The Black Rose of Sangerhausen." No other Rose resembles it; no other Rose is such a deep maroon—in fact, it is almost black, so dark is the color. You will want it because of its novelty and distinctive color. Nigrette created a sensation when first introduced in Europe, and no less a furore when exhibited in America. It is a distinct novelty. \$1.50 each, \$15 per doz.

Countess Vandal

Patented Roses

Texas Centennial

Plant Patent No. 162

A new Rose originated right here in Tyler, and pictured in color on the front cover. The brilliant vermillion-red of the opening bloom shades to deep, rich pink as the flower matures. The color does not fade in hot sun and dry weather. A Rose of the highest quality in size, color, fragrance, freedom of bloom, and vigor of plant. \$1 each, \$2.50 for 3, \$10 per doz., prepaid.

Hinrich Gaede

Hinrich Gaede

Not a patented Rose, but it is extremely beautiful. We call the color orange-yellow, flushed with nasturtium-red; the words don't mean half as much as the picture. Large, double flowers are carried on long stems. Free-blooming plants. Special price, 50 cts. each, \$5 per doz.

Matador *(Plant Patent No. 170)*

A great Rose—great because of the deep scarlet-crimson color, the fragrance, the vigorous plant, and the number of blooms produced. We like it, and believe you will like it, too. \$1.50 each, \$15 per doz.

Radiant Beauty

Plant Patent No. 97

A dark red Rose much resembling Francis Scott Key, but a much better color. The finish of the petals is unusual—in fact, it may be called an egg-shell finish. An American introduction, and is truly a fine Rose. \$1.50 each, \$15 per doz.

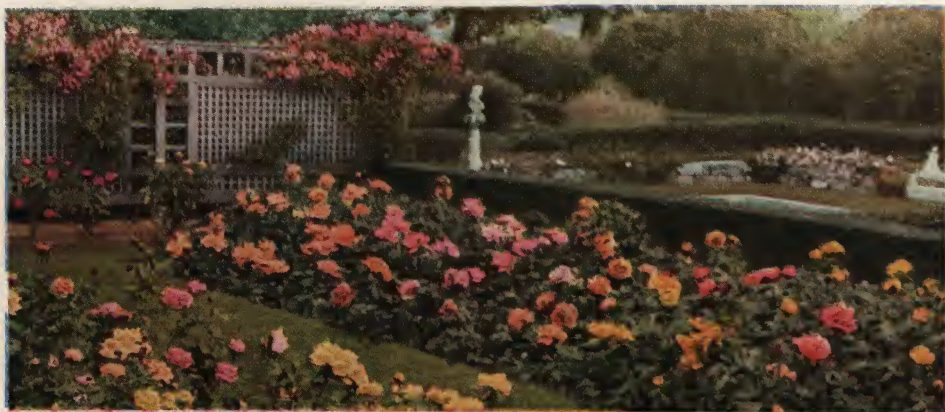

© Radiant Beauty

Souv. de Mme. C. Chambard

A well-known, sweetly scented Rose especially good in the South. The color is rosy flesh, shaded saffron and salmon, with yellow at base of petals. Special price, 50 cts. each, \$5 per doz.

Souv. de Mme. C. Chambard

Shamburger's Select Hybrid Tea Roses

HYBRID TEA ROSES are the "monthly blooming" varieties that you find in the great Rose-gardens of the world. The flowers are beautiful in form, and the great range of colors is amazing; besides the solid colors, there is a marvelous blending of shades and tints—almost too many to number. Generally speaking, the plants vary from 2 to 3 feet in height, and will survive mild winters without protection. In cold climates they should be mulched with straw litter or leaves.

For your convenience in selecting the colors you desire, our Roses have been arranged under color headings.

All Roses in this Catalogue are sold at 35 cts. each, \$3.50 per doz.,
unless otherwise stated

Pink Roses

Betty Uprichard. The color of this popular variety is brilliant orange-carmine on the outer surface; copper-red buds open to semi-double blooms. A strong-growing, free-blooming, and healthy Rose.

Briarcliff. A descendant of the noted Columbia family. The stems are long and stiff, and bear pointed buds. The flowers are double, high centered, fragrant, a beautiful brilliant rose-pink.

Charles P. Kilham. Brilliant orange-pink suffused with glowing yellow. The blooms are very large and shapely, and slightly fragrant. The plants are low growing, rarely over 24 inches high, bushy and very free blooming.

Editor McFarland

For a remarkable collection of Roses at a remarkably reasonable price, see the "Brilliant Beauty" group on page 8.

GROWERS OF SELECTED ROSES

PINK ROSES, continued

Dame Edith Helen

Columbia. A lively bright pink which deepens in color as the bloom matures; sweetly scented. Especially good in late summer and autumn, when the blooms are borne in profusion. A reasonably strong grower with healthy foliage.

Dainty Bess. Single flowers which are often 3 inches across. The color is a pure flesh-pink with tints of old-rose on the reverse of the petal. A variety that has attracted a great deal of attention, as the flowers are at times nearly square, somewhat after the fashion of clematis.

Mrs. Charles Bell

Dame Edith Helen. At its best in both color and size in spring and autumn. The flowers are clear pink, very fragrant, and carried on strong, erect stems. A vigorous-growing plant. Generally considered a top-notch pink Rose and we believe it deserves the position.

Editor McFarland. Among the finest of the deep pink Roses. The color, which is a clear brilliant pink, holds all through the season. The blooms are fragrant, carried on long stems, and extremely desirable for cutting.

Hollywood. The bloom, which is of medium size but full double, is a dark rose-red with darker veinings; it is extremely fragrant and carried on long stems. The plant is bushy, upright in habit.

Jonkheer J. L. Mock. The blooms are very large, full double, and rich deep pink, with the reverse of the petals showing silvery rose. A heavy bloomer in spring and fall, with a moderate number of blooms in summer.

Killarney. Bright sparkling pink blooms come from long-pointed buds. Popular both for the garden and for growing under glass. It is a strong, robust plant, giving flowers liberally.

La France. One of the oldest Hybrid Tea Roses in cultivation but equal to many of the modern sorts. The blooms are bright pink with curling petals that show silvery tints; fragrant.

Lady Ashtown. Both the buds and the blooms are a shiny pink, with a slight touch of yellow at the base of the petals; quite fragrant.

Leonard Barron. Unusually large and full double flowers with nearly a hundred petals. The color is a blended light salmon and shell-pink with a suffusion of pale copper.

Lulu. The buds are unusually attractive, long, slender, and brilliantly colored with orange-pink and copper; the open flower is flat and nearly single, but retains its pleasing color. Desirable both in the garden and for cutting.

Mme. Butterfly. An extra-fine Rose which should be in every garden. Both the buds and the open bloom are light pink with tints of gold near the base of the petals; richly perfumed. The plant is strong growing and throws up many stems surmounted with sprays of flowers. Mme. Butterfly can be depended on to bloom under trying conditions.

Mrs. Charles Bell. Similar to Radiance but with a softer shade of shell-pink both in bud and bloom. A strong-growing plant with clean foliage seldom attacked by dust. Like its parent, Radiance, this variety is a most delightful Rose, blooming freely in the South.

Mrs. Henry Bowles. A highly recommended variety with clear pink flowers which shade slightly lighter as they open. The blooms are reasonably high centered and remain in good condition for many days after cutting.

Mrs. Henry Morse. The blooms have two contrasting tones of pink with an under tinge of yellow; they are double, large, and have a slight fragrance. Plants are extremely hardy.

Mrs. Lovell Swisher. The blooms carry rich tones of salmon-pink and gold, changing to flesh-pink at the edges of the petals. The plant is free blooming in spring and autumn.

Pink Grootendorst. (Hybrid Rugosa.) A sport of the red F. J. Grootendorst and similar except that the color is a light shell-pink. Vigorous and bushy, and constantly in bloom.

Premier Supreme. The flowers are very large, high centered, double, and moderately fragrant. The color is a deep rose-pink, almost scarlet. Plant is a strong grower.

PINK ROSES, continued

Radiance. Probably the most reliable pink Hybrid Tea Rose in commerce today, and particularly good in the South. The blooms are brilliant rose-pink with lighter tints on the reverse of the petals, globular in shape, and very fragrant.

Souv. de Mme. C. Chambard. Large, fragrant, rose-flesh-pink blooms shaded with salmon and yellow at the base of the petals. An upright plant which in habit of growth much resembles Frau Karl Druschki. See color illustration, page 5. 50 cts. each, \$5 per doz.

Rapture. Long-pointed buds and full blooms, both of which are a glowing pink. Very much like Mme. Butterfly, but with a form of bud and bloom and a color shade that makes it entirely distinct from others.

Willowmere. Rich pink with a shining yellow glow. The blooms are reasonably large but with only a slight fragrance. A splendid bedding Rose and also has great value for cutting.

Your Rose collection should include some of the Polyanthas. See pages 14 and 15.

Kaiserin Auguste Viktoria

Etoile de Hollande

Joanna Hill

President Herbert Hoover

Red Roses

American Beauty. (Hybrid Perpetual.) Dark pink shaded with deep carmine. The plant should be in a cool location and given heavy fertilization, under which conditions the growth will be vigorous and the blooms produced in abundance.

Ami Quinard. An exceedingly deep crimson, so dark that in some lights it appears almost black. A distinct novelty because of its color. Strong-growing plants that will produce many full double flowers.

Charles K. Douglas. A deep crimson-scarlet which rarely fades even under the hottest sun. The blooms are large and slightly fragrant. It is an exceptionally good garden Rose, branching in habit, clean foliage, and yields a bountiful supply of flowers. Each year increases its popularity.

Cuba. Vivid orange-scarlet buds followed by copper-red and orange-vermilion blooms, a combination that is extremely striking and showy, a bed making a wonderful display.

Director Rubio. The plant is rather dwarf, but carries many erect stems which are topped by light red blooms of great size, semi-double and moderately fragrant. One of the more recent introductions from France, where it has been a favorite red variety.

E. G. Hill. Dazzling red blooms that shade to deep crimson without a touch of blue. Exceedingly good garden Rose, vigorous, free flowering, and making friends even among the most critical growers of Roses. It seems to hold the color well even under scorching suns.

Etoile de France. Vivid crimson blooms with centers shading to cerise. An excellent bedding variety as the plants are free blooming and have stiff, upright stems and good foliage.

Etoile de Hollande. The brilliant red blooms hold well during hot weather, but are particularly good in the cool days of autumn. Well known everywhere and seems to have few serious faults.

Francis Scott Key. Light crimson buds open into a full double bloom of the same color. A desirable variety for the South, where it is at its best in autumn. The plant is erect in habit, with good foliage.

F. J. Grootendorst. (Hybrid Rugosa.) Small, bright red flowers with fringed petals are produced in large clusters the whole season. Makes a desirable specimen shrub or a fine everblooming Rose hedge.

General Jacqueminot. (Hybrid Perpetual.) Scarlet-crimson buds and clear red, very fragrant flowers. Plants grow from 3 to 6 feet high, and frequently bloom twice in a season.

Grenoble. A brilliant red, almost scarlet, bloom opens from a crimson bud. May be numbered among the best dozen red Roses, and is particularly desirable for cutting.

Gruss an Teplitz. (China or Bengal Rose.) Large, bushy plants that are covered the entire season with clusters of bright red flowers, which make a lovely Rose hedge or a bed of brilliant color.

E. G. Hill

Talisman

Radiance

RED ROSES, continued

Willowmere. (See page 8)

Etoile de France. (See page 9)

the orange. A beautiful variety, and one you will enjoy in your garden.

Red Radiance. Deep rose-red blooms which may shade to a light crimson. Extremely popular in the South because of its free-blooming qualities, excellent habits, and clean, resistant foliage.

Sensation. Deep scarlet-crimson with maroon markings. The flowers are often 5 inches in diameter, full double, moderately fragrant, and keep in good condition for several days after cutting. Especially good in the autumn.

Yellow and Multi-colored Roses

Edith Nellie Perkins. A handsome two-color Rose; the inside of the petals is salmon-pink, the outside is coppery red and orange. The flower is large, full double, with a fine pointed center. A Rose that can be highly recommended.

Golden Dawn. This Rose came from Australia and has proved entirely satisfactory in America. The large buds are bright yellow but sometimes have a tinge of red. The large flowers are a clear unfading lemon-yellow and deliciously fragrant, produced throughout the entire season.

Golden Ophelia. The heart of the flower is golden yellow, shading lighter towards the edge of the petals. The color is clearest in autumn. Plants are strong, healthy growers and free blooming.

Golden Pernet. A superb clear yellow Rose for general garden use. Blooms freely all the season, even in dry, hot weather. Strongly resembles Julien Potin. Plant erect, with clean, glossy foliage.

Harison's Yellow. Medium-size, semi-double blooms borne in small clusters. The color is a bright yellow. The plants are about 6 feet high, very hardy, and bloom profusely in early summer.

Hadley. A splendid dark crimson-red with petals of a velvety texture; slightly perfumed. In spring and autumn the flowers are large, but in midsummer inclined to be somewhat smaller.

John Russell. The flowers are very large, deep crimson, so dark they are almost black. An exceedingly handsome Rose that always attracts attention.

Killarney Brilliant. Similar to Killarney but very much darker in color; in fact, so dark that it is classed as a red Rose. Flowers semi-double.

Lord Charlemont. A magnificent deep crimson, high-centered, fragrant flower carried on a moderately bushy plant. Free blooming in spring and autumn, with a goodly number of blooms in midsummer.

Lucile Rand. Full double, bright rose-carmine blooms with shades of yellow. Plant strong growing and free blooming.

Margaret McGredy. A Rose that has made good in all parts of the country. The blooms are solid orange-vermilion, a color that grows lighter when the blooms are fully opened. The plants are upright and have strong, stiff stems.

National Emblem. Dark crimson, overlaid with a velvety crimson that shades to vermilion toward the edges. The flowers are medium size, full double, and moderately fragrant. Plant grows about 2 feet high, with few thorns.

Olympiad. Blood-red blooms that are shaded with fiery copper and yellow toward the base of the petals. Originated in France, and introduced under another name. There it received a gold medal in 1930, and other awards since that time. The American introducer was permitted to rename the variety in honor of the Olympic games held in Los Angeles in 1932. It is a most unusual Rose, attracting attention everywhere.

Patience. The flowers are scarlet, with shades of orange and orange-scarlet, high centered and moderately fragrant. The color varies somewhat, depending on soil, sun, and moisture, and at times seems to show shades of pink with

Edith Nellie Perkins

Golden Dawn

GROWERS OF SELECTED ROSES

YELLOW AND MULTI-COLORED ROSES, continued

Independence Day. The buds are bright yellow, with shadings of copper and brown; the petals hold similar colors, but rapidly change to a light orange-pink. The plant is nearly always covered with buds and bloom.

Joanna Hill. Resembles Ophelia but is more pronounced in the coloring, which is a rich creamy yellow with a flush of orange at the base of the petals. A fairly good bedding Rose but most useful for cutting because of the long-stemmed flowers.

Julien Potin. Deep yellow buds and richly colored primrose blooms, carried on long stems. In midsummer the blooms are rather small, but early in the season and in late autumn the flowers are superb.

Lady Hillingdon. (Tea.) Deep saffron-yellow, fragrant flowers that grow lighter towards the edge of the petals and as the blooms expand. The plant is erect in growth, hardier than most Tea Roses, but in cold climates requires careful protection.

Luxembourg. Rich apricot-yellow, shaded with copper and marked with lighter yellow at the tips of the petals; the color holds without fading or burning. Very free blooming and entirely satisfactory for garden culture. In fact, Luxembourg comes close to being the premier yellow Rose for the South, and is deservedly popular in the North.

Mevrouw G. A. van Rossem. A new Rose which is a glowing orange or apricot with undertones of golden yellow; the combination resembles golden salmon and light orange, with the reverse of the petals light bronze. It is a desirable bedding variety and exceedingly useful for cutting.

Mme. Nicolas Aussel. Intensely fragrant, full double blooms which are a pleasing shade of salmon marked with carmine, ochre, and yellow. A desirable new variety that should be grown by all who wish to have the new introductions in the garden. Careful tests in many sections indicate that the variety has a most promising future, both south and north.

Joanna Hill

Margaret McGredy

Mrs. Pierre S. du Pont. A bright yellow that does not fade in intense sun. The blooms are large, have a spicy fragrance, and are produced very freely. An exceptionally good yellow variety.

President Herbert Hoover. A combination of cerise-pink, yellow, flame, and scarlet. In hot weather the color is somewhat dim, but early in the season and in late autumn it is brought out to its full richness. Grows well in partial shade, but seems to succeed anywhere.

Rosa Hugonis. A shrub Rose with long sweeping branches, well covered with lemon-yellow flowers. Desirable for specimens or for use in border plantings.

Roslyn. Golden yellow flowers with shadings of orange on the reverse of the petal. The buds are tapering and when partially opened are extremely attractive. The color is rich and glowing; this, combined with the lasting qualities of the flowers, makes them desirable for cutting and decorative work.

Sunburst. Rich yellow blooms strongly marked with orange at the center; quite fragrant and very attractive. Needs time and attention to become established, after which it grows and blooms well.

Talisman. Brilliant red and gold buds followed by scarlet-orange and yellow blooms. In early spring and late autumn the blooms are at their best. Talisman is superb for both garden use and cutting. Since this Rose was introduced in 1929 it has become a prime favorite in all parts of the country.

Ville de Paris. Clear yellow buds followed by extra-large flowers of the same color, which do not fade even in bright sun. A very desirable yellow variety. The plant grows tall and branching, with deep green, leathery foliage.

Sunburst

Olympiad

All Roses in this Catalogue are sold at 35 cts. each,
\$3.50 per doz., unless otherwise stated

Mme. Butterfly

White Roses

Frau Karl Druschki. (Hybrid Perpetual.) The buds are slightly tinted with pink but open into snow-white blooms. The flowers are enormous and are borne very freely until about the first of July. Under favorable conditions a second blooming period may come in early autumn. The plant is extremely strong growing, often reaching 8 feet in height.

Mevrouw G. A. van Rossem

Caledonia. Superb white Hybrid Tea Rose. The blooms are as clear as alabaster, very large in size, with curved and infolded petals, and have a dainty fragrance. Free blooming in spring and fall, and yielding a reasonable number of flowers in mid-summer.

Kaiserin Auguste Viktoria. The buds are creamy white but the flowers are white as snow, with only a slight tint of lemon-yellow at the center; large and fragrant. The plant is a reasonably strong grower and seems to be entirely hardy.

Ami Quinard

Killarney, Double White. The clear white flowers of this popular variety are medium size, double, and with a very slight fragrance. In bud and in open bloom it carries the typical Killarney form, with a few more petals than the original pink variety.

Mme. Jules Bouche.

A desirable white variety for bedding with other Hybrid Teas. The blooms are large, fragrant, and have a slight blush tint at the center. The half-open bloom is as dainty and beautiful as a cluster of apple blossoms in spring.

Frau Karl Druschki

White Ensign. The pure white flowers have a delicate cream tint at the base of the petals, and a strong Tea Rose perfume. The plants are broad and bushy, and therefore indispensable for bedding.

White Maman Cochet. Large, double blooms with a very light lemon-yellow tint at the center. Vigorous, upright-growing plant that blooms abundantly during the whole season.

Roslyn

Climbing Roses

All Climbing Roses are priced at 35 cts. each, \$3.50 per doz., postpaid

Climbing Talisman

Jacotte. Large, semi-double, brilliant apricot-orange flowers; one of the best of the so-called yellow ramblers.

Kitty Kininmonth. An Australian Rose with large, semi-double, bright pink flowers distinguished by golden stamens. A vigorous - growing and free-blooming variety.

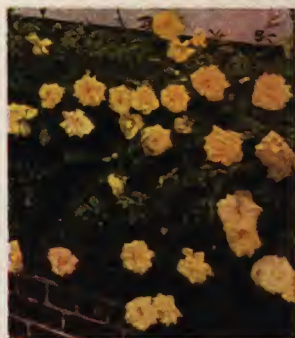

Marechal Niel. This Rose may be called the favorite climbing Rose of the South. The blooms are golden yellow and are carried in clusters. A well-developed and trained plant is a gorgeous sight, literally a sheet of gold.

Mermaid. Large, single flowers, nearly 5 inches across. The bud is yellow and opens into a soft primrose bloom. Very effective because of the free-blooming habit of the plant, and its sturdy growth.

Cl. American Beauty. Flowers brilliant carmine, of the same form as the bush Rose. The plants are reasonably vigorous but bloom freely.

Cl. Cecile Brunner. Flowers are rosy pink and yellow, borne in sprays. The plant should be protected in cold climates.

Cl. Columbia. Bright pink, sweetly scented blooms. A good grower and a free bloomer following the habit of its parent, the Hybrid Tea of the same name (see page 7).

Marechal Niel

Primrose

Paul's Scarlet Climber.

Great clusters of extremely brilliant red blooms. In the spring it is a mass of color and may produce some flowers in early autumn. The plant is moderately vigorous but is extremely satisfactory because of the blooming habit.

Cl. President Herbert Hoover. Flowers identical with the bush form. The only difference is that in this type the plant has a climbing or pillar habit.

Primrose. Flowers are soft primrose-yellow, full double, and borne in quantities. The plant is moderately vigorous and should be protected in extremely cold climates. However, the beauty of plant and bloom well rewards the slight attention needed.

Climbing Cecile Brunner

Paul's
Scarlet
Climber

Spanish Beauty

CLIMBING ROSES, continued

Cl. Red Radiance. A strong-growing plant carrying many flowers identical in color and form with the bush Rose of the same name.

Scorcher. Another comparatively new Australian Rose. The blooms are semi-double and brilliant scarlet-rose in color, borne in great quantities on long stems. There seem to be two flowering periods, one in the earlier days of the season and a second a few weeks later, with a few flowers produced until late autumn. It is an intermittent rather than a continuous bloomer.

Spanish Beauty (Mme. Gregoire Staechelin). Broad, frilled petals of a delicate pink, with stains of red in the bud form. Very fragrant.

Cl. Talisman. Identical in color and form of bloom with the famous bush variety.

Polyantha Roses

A class of Roses that bloom practically the entire growing season. The flowers are small, but carried in such large clusters that the plant is covered with color. For massing, edging, or low hedges they are superb.

All Polyantha Roses here listed are priced at 35 cts. each, \$3.50 per doz., prepaid, except where noted. Quantity lots of 25 or more for border planting, 25 cts. each, prepaid

Chattillon Rose. Enormous clusters of bright pink, semi-double blooms. We consider it a fine variety.

Eblouissant. The color is a deep rich red, shaded with velvety crimson. Very free blooming, and a Rose that is growing in favor in the large gardens of the country. The plants are dwarf, rarely growing more than a foot high.

Else Poulsen. Large, single, bright rose-pink flowers carried in clusters on upright-growing plants.

Gloria Mundi. One of the most brilliant Roses in the Polyantha family. The full double blooms are glowing orange-scarlet, larger than the average, and borne in clusters. A vigorous, bushy plant and very free blooming.

Golden Salmon. A distinct, bright, and pleasing orange color; really the best Polyantha of this particular shade. Makes a splendid display when planted in large groups, but the faded trusses should be cut if continuous bloom is desired.

Gruss an Aachen. A variety that can be depended on to give flowers the entire season. The blooms are double, slightly perfumed, light flesh-pink marked with salmon-yellow, the center much deeper than the edges. In autumn it seems to show distinct coppery red lines.

Ideal. In a mass planting makes a splendid showing of rich dark scarlet blooms shaded very much darker. The plants are vigorous and bear a great amount of bloom in compact bunches. At its best in spring and autumn.

Katharina Zeimet. Very large clusters of small, double white flowers that resemble little chrysanthemums. An extra-fine variety despite the size of the blooms.

Kirsten Poulsen. The plants grow from 3½ to 4 feet high and therefore are useful for massing or for hedges. The single, light red flowers are carried in great sprays. Interesting because of its brilliancy.

Golden Salmon

GROWERS OF SELECTED ROSES

POLYANTHA ROSES, continued

Lafayette. A variety characterized by splendid growth and free-blooming qualities. The flowers are large, semi-double, light crimson, and borne in clusters of 40 or more blooms. The color holds well during hot weather. This variety differs from most others of the class, and seems to be a member of a new group which includes Else Poulsen and Kirsten Poulsen.

Miss Edith Cavell. Small, semi-double flowers of brilliant scarlet-red with darker shadings. The blooms are carried in large clusters on well-branched plants, and frequently cover the plant with a gorgeous display of color.

Ideal

Ruth Shamburger

Ruth Shamburger, continued

which is seldom affected by disease. Visitors to our gardens have spoken very highly of this new variety. 2-year plants, 50 cts. each, \$5 per doz., prepaid.

Orleans. One of the most important Polyantha Roses, as nearly all the orange varieties are descended from it. The color of Orleans is light red with a tinge of white at the center of the bloom; flowers are small, a little more than semi-double, and are produced all summer.

RUTH SHAMBURGER. A new variety originating in our own fields. It is a member of the famous Poulsen family and bears many of the characteristics of that group. It may be termed a tall-growing baby rambler. In color the blooms are very light pink, semi-double, and borne in large clusters. The individual flowers have five petals, which have considerable substance and remain in good condition for some days after cutting. The plant is a vigorous grower with clean glossy foliage,
